

THE MAJIK HOUSE

our quick guide to
home automation
& integration*

*Making everything work together
- simply and easily.

www.majikhouse.com

It's understandable that for most people, home automation means home entertainment: cinema and music systems, dynamic lighting and the touches of technology which enhance where we live.

For us, home automation also extends to ensuring that where we live is secure, our loved ones are always safe and our valuable possessions are protected.

Smart home automation and integration of systems means making sure all the elements work together in harmony; they compliment each other and deliver entertainment and enjoyment, convenience and security in equal measures.

Here are just a few thoughts about creating a harmonious, automated home that's also as safe as houses.

Imagine a simple scenario...

Arrive home and enter the code on your iPhone or mobile device to disarm the alarm.

Before you've even taken your coat off, your home automation system has recognised you and turned on your favourite TV channel or radio station, adjusted the thermostat to the ideal temperature, and created the perfect ambience with the lighting.

When planning a whole-home solution, the smart thing to do is to think of the possibilities for what an automated home could do for you.

If you think of the difference the remote control made to watching television, then think of what current technology could mean to your living space.

Gone is the notion that a safe home is simply one that secures the house from would be intruders. Today's smart home empowers you to control and monitor your property in a myriad of ways thanks to the happy marriage of smart locks, CCTV and home automation.

Your enjoyment and satisfaction: key components hard-wired into every project.

The underlying purpose of home automation should always be to make a property smarter and more enjoyable to live in and live with. We don't expect you to know what we know about every technical aspect of an installation, but we do know you expect us to deliver a system which is reliable, intuitive, easy to use and meets and exceeds your expectations.

Being remote doesn't mean losing control.

We embrace the use of mobile technology and appreciate it's uses beyond communication and entertainment, we see the advantages in utilising it to manage your home remotely.

After all, why shouldn't making sure everything is safe and secure be as easy as turning on a TV?

Always at home with "mockupancy".

Security professionals say the two biggest deterrents to burglary are light and sound. A smart system can set lights, every lock can check itself, TV and music to go on and off automatically at different times of the day or on demand, just as if you were home.

Be sure that everyone sleeps securely.

A monitored security system offers protection and is a wise addition to any home, but combine it with a home automation system for an even smarter solution. Who hasn't had to get out of bed to make sure you locked the whole house before retiring for the night?

We can solve that with a press of a button and every door lock can be secured without having to leave the comfort of your duvet.

No chances take. No corners cut.

Many of the same principles applied to AV or lighting systems also stand true for designing and installing home security. From the outset, considered planning, good design and ease of operation underpin everything we do.

Knock, Knock. Who's there?

A touch screen with intercom makes it easy to check on the whole family and broadcast messages throughout the house in a flash. When cameras are connected, you can identify who is at the front door from virtually every screen in the house, before you get up to open it.

Networking is always so much better than not working.

A smart home which operates intuitively is underpinned by the network which ties-in all the system components and makes them all available at your fingertips.

Whatever equipment we specify to meet your requirements, we'll ensure that everything communicates and operates seamlessly from the remotes and mobile devices everyone is happy to use.

Our people: the most important component

We continually invest in the development and skills of the Majik House team, with industry specific training, product education and ongoing review of best practice. That's why numerous manufacturers consider us as best in class in our field and use us as their "test bed" for new equipment, software and system integration.

THE MAJIK HOUSE

Some brands we use.

The Majik House are truly independent which means we are free to specify the equipment which is best suited to each individual project, regardless of manufacturer.

We work closely with some of the leading manufacturers, ensuring whatever we install will give you years of pleasure from your investment.

Should you have specific brand preferences, then we are always happy to work within your requirements.

Serviced systems mean best performance.

Just as the engine of thoroughbred sports car operates at it's optimum with the best fuel and professional servicing, you too can continue to enjoy your smart home investment by keeping it at it's peak.

We recommend that home automation systems and components receive regular "health checks", upgrades and software programming updates on a yearly basis.

By keeping your system happy, we'll guarantee you continued years of high performance and enjoyment.

If you'd like to find out more about the benefits and reassurance afforded by our comprehensive servicing packages, then please just ask a member of the Majik House Team.
